

Power: Transmission, Storage, Sales, and Trading

Energy technology is evolving. Demand for power and efficient infrastructure continues to grow. The sophistication of trading advances. The global team at Hogan Lovells handles energy and financial market derivative transactions on a regular basis. We understand the important role that derivatives play in energy trading portfolios.

We negotiate financial derivatives and high-value structured transactions, advise on financial regulations impacting your business, and provide commodity-related dispute resolution.

Representative experience

A trading affiliate of a U.S. utility on “right-way” secured energy trading facilities with power plants as collateral.

Representing major California investor-owned electric utility in litigation over the termination of a long-term power purchase and sale agreement.

Advising purchaser in negotiation of a renewable energy credit purchase agreement.

Advising a global financial institution on the regulatory and compliance implications of trading derivatives in over 20 emerging market jurisdictions.
