

Aviation Manufacturers and Repair Facilities

You make the nuts and bolts of the aviation industry. Manufacturers and repair facilities produce and fix aircraft components intended to keep planes flying safely. So it's vital to keep up with the maze of regulations governing your business.

We help clients comply with rules, from implementing drug and alcohol testing, to handling FAA voluntary disclosure, and dealing with accident investigations. Members of our team have worked at the FAA, and bring an insider understanding to these matters, as well as enforcement proceedings.

You can feel confident in your business practices and products with Hogan Lovells on your side.

Representative experience

Represent Aerion on FAA noise/certification and legislative matters in connection with its plans to develop a supersonic business jet.

Helicopter engine manufacturer against Part 13 complaint filed with FAA alleging noncompliance with regulatory requirements regarding making available instructions for continued airworthiness.

Advising Rolls-Royce North America on regulatory matters ranging from manufacturing of aircraft engines to the work of its subsidiaries that are certificated as repair stations.

Advising Honeywell International, Inc. on regulatory matters
