

## Oil and Gas: Liquefied Natural Gas (LNG)

We collaborate with clients on projects at all levels of the liquefied natural gas (LNG) value chain and project life cycle. From LNG liquefaction and regasification, to floating LNG and export projects, we have provided innovative solutions in Africa, Asia, Australia, Europe, the Middle East, and North and South America. We solve your toughest legal problems by bringing the right people together to work with you as part of your team.

We help you mitigate risk across the value chain so that you can focus on doing business. The LNG group at Hogan Lovells supports the entire LNG project life cycle — from project inception and financing, through permitting, construction, and operational matters. We also address legal issues related to shipping, short-term LNG trading, long-term sales, and purchase agreements.

### Representative experience

Advising Statoil on Snøhvit LNG project, including LNG SPAs, EU competition law issues, LNG shipping pool, delayed start-up and force majeure, diversions, and price review.

Advising a major financial institution on financing and credit support for proposed LNG offtake from OK LNG project in Nigeria.

Advising JKC Australia LNG on the EPC contract for the onshore LNG facilities for the US\$34bn Ichthys Project facilities to be built near Darwin, Australia.

### Contacts

José Luis Vittor,  
Houston

---

### Industries

Energy and Natural  
Resources

Advising the developer of a proposed LNG export facility on the U.S. Gulf Coast on National Environmental Policy Act and resource impact issues.
